Cycle 1 (12/27- 01/14) Change Log

BT Tech 🤖 Team Summary:

- 12 🪲 Bugs Squashed
- 17 💡 Features Added
- Some Highlights:
    - BT is becoming faster through asynchronous loading. An example of asynchronous loading is on the Organizations Page, where different tabs are loaded as needed.
    - More comprehensive testing is being added so that bugs are caught before reaching production.
    - BT is gradually being restyled to look more modern. You might even find some color-changing surprises (if you know where to click).... 🤫

Bug Fixes:

- New intakes are no longer creating a banner case when they shouldn't be.
    - Now, when a new case is created from a client show page, the case is automatically assigned to the person who created the case. The case can be reassigned after being created.
- Life services no longer have to manually set due dates when adding a task.
    - Information related to tasks can be inputted when creating the task.
- Tasks that are assigned are now consistently showing in that user's "My Tasks"
- Affiliate placement tags set in modal windows are now tied to the affiliate placement row.
    - Ensures that information related to affiliate placements will be stored correctly in the database
- Placing clients with group practice partnerships no longer throws an error message.
- Reduced production errors by adding more checks that users are signed in.
    - If a user was signed out and they tried to access progress notes, a nil error was thrown.
- Adding clinicians and setting an administrator on Group Practices under Affiliates no longer throws an error message.
- Reduced production errors caused by nil values.
- Changed the onsite Lincoln Lab counselor from Heidi to Nicole
- Event times in the event calendar are now displaying correctly.
    - Before, some of the times were five hours ahead.
- The arrows on dropdown menus have been corrected.
- The table on the all intakes page has been re-styled to fit properly.

Feature Improvements/Additions:

- Redesigned email templates to include KGA's logo and location.
- Accounts are now locked after ten failed attempts to get in.
    - Users then must unlock the account through their email, or wait for an hour.

- Red-flag cases will be emailed to Lauren when they're associated with Work Life, or Anjala and Laura when they're associated with counseling.
- The organizations index page is now running faster because components are being loaded asynchronously. (Adding asynchronous loading will be an ongoing project).
- A note was added to the top of clinician and provider show pages. The note displays additional information about who the clinician/provider is accepting.
    - The note is automatically removed after 48 hours, but users can remove the status before then.
- Refactoring of how task map icons are generated
    - Will most directly affect users on the provider search index page, where icons have been added.
- Events were updated so that FRB can now be applied to both training and coaching work.
- Sleep assessment was removed as an attachment that can be sent to clients.
- An index page that shows all providers which are currently accepting patients was added.
    - This page has live updates.
- Reception can now create manager consults from a client show page.
    - The client is set as a manager_consult_contact, and the manager consult is set as the reception team member.
- The delete button has been removed from an edit task modal when the task is also tied to an affiliate search or provider search.
- Lauren's dashboard has been updated to show the worklife workload.
- The ability to refer a client to Talk Space through Big Top was added.
- Provider searchers can now be reopened.
- We now have prettier 500 and 404 error pages.
- We also have better styling on hovercards
